Boosting developer success on Google Play

16 March 2021

Posted by Sameer Samat, VP, Product Management

Helping developers build sustainable businesses is a core part of Google Play's mission. We work with partners every day to understand the challenges they face and help them bring their innovative ideas to life. Getting a new app off the ground and into orbit is not easy! To aid their quest for growth we provide a broad range of support, from powerful [marketing tools](#) and [actionable data in the Play Console](#), education via [Play Academy](#), [best practices](#) and [thought leadership](#) resources, programs such as the [Indie Games Festival](#), [Indie Corner](#), and [accelerator programs](#) around the world. We're always looking for new ways to give them an added boost.

Starting on July 1, 2021 we are reducing the service fee Google Play receives when a developer sells digital goods or services to 15% for the first \$1M (USD) of revenue every developer earns each year. With this change, 99% of developers globally that sell digital goods and services with Play will see a 50% reduction in fees. These are funds that can help developers scale up at a critical phase of their growth by hiring more engineers, adding to their marketing staff, increasing server capacity, and more.

While these investments are most critical when developers are in the earlier stages of growth, scaling an app doesn't stop once a partner has reached \$1M in revenue — we've heard from our partners making \$2M, \$5M and even \$10M a year that their services are still on a path to self-sustaining orbit. This is why we are making this reduced fee on the first \$1M of total revenue earned each year available to every Play developer, regardless of size. We believe this is a fair approach that aligns with Google's broader mission to help all developers succeed. We look forward to sharing full details in the coming months.

As a platform we do not succeed unless our partners succeed. Android and Google Play have always listened to our developer partners from around the world and we continue to take their input into account as we build and run the ecosystem. We look forward to seeing more businesses scale to new heights on Android, and to further discussions with our developer community to find new ways to support them technically and economically as they build their businesses.
